

ABSTRACT OF THE DISCLOSURE

A print terminal includes a memory reader for reading image data recorded in a recording medium, an image-capturing unit for capturing the image data read by the memory reader, and an image-processing unit for processing the image data captured by the image-capturing unit. The image-processing unit has a first rotation-processing function for rotating a print image to be used in printing the image data, a second rotation-processing function for rotating a print-medium image to change the orientation of a print medium to be used in printing the image data, and a third rotation function for simultaneously rotating both the print image and the print-medium image.
